BE GARRY TAN

gstack

Turn Claude Code into
an engineering team.

by Garry Tan • Y Combinator CEO • Deck created by Jeffrey Kim with slides-grab

Shipping production code solo is brutally hard.

- Code review, security audits, QA testing — each one demands a specialist.
- Architecture decisions pile up with no one to challenge them.
- The bottleneck isn't coding — it's everything else around it.

You need a team. Or something that acts like one.

WHAT IS GSTACK?

28 slash commands that turn Claude Code into a virtual engineering team.

🎯

Specialized Roles

CEO, Designer, QA Lead, Security Officer, Eng Manager, and more.

⚡

30-Second Install

One git clone, one setup script. Nothing touches your PATH or runs backgrounded.

🔒

Fully Open Source

MIT licensed, free forever. No premium tier, no waitlist.

CORE PHILOSOPHY

The Sprint Loop

Think — Plan — Build — Review — Test — Ship — Reflect

Chained Stages

Each stage feeds into the next. Nothing falls through the cracks.

Assumptions First

Challenge product assumptions before writing a single line of code.

Full Cycle

From idea validation to post-deploy monitoring.

STAGE 1

Think & Plan

/office-hours

Validate ideas through 6 forcing questions. Reframes vague concepts into actionable specs.

/autoplan

Auto-runs CEO, Design, and Engineering review in sequence with encoded decision principles.

/plan-ceo-review

Four scope modes — Expand, Selective, Hold, or Reduce — to calibrate what you're building.

/plan-eng-review

Architecture review with data flow diagrams, edge cases, and test matrices.

Challenge every assumption before writing a single line of code.

STAGE 2

Build & Review

/review

Staff-engineer-level code audit. Auto-fixes obvious issues and flags completeness gaps.

/investigate

Systematic root-cause debugging with hypothesis testing. Finds bugs before users do.

/design-review

Design audit with atomic commits and before/after screenshots for every change.

- Auto-fix + completeness check on every pass. Catches production bugs that pass CI.

STAGE 3

Test & Secure

/qa

Real browser testing with Chromium. Finds bugs, then auto-generates regression tests for every fix.

/browse

Direct Chromium control at ~100ms per command. Import browser cookies for authenticated testing.

/cso

Chief Security Officer. OWASP Top 10 + STRIDE threat modeling. 8/10+ confidence gate, 17 false-positive exclusions.

/benchmark

Baseline page load times, Core Web Vitals, and resource sizes before shipping.

STAGE 4

Ship & Reflect

`/ship`	Syncs main, runs tests, audits coverage, opens PR. Bootstraps test frameworks if missing.
`/land-and-deploy`	Merges PR, waits for CI, deploys, verifies production health automatically.
`/canary`	Post-deploy monitoring for console errors, performance regressions, and failures.
`/retro`	Weekly team-aware retrospectives with per-person breakdowns and shipping streaks.

SAFETY

Safety Rails

Move fast, but safely.

`/careful`

Warns before destructive commands like `rm -rf` or force push. Override when you're sure.

`/freeze`

Restricts file edits to a single directory. Prevents accidental changes to the rest of the codebase.

`/guard`

Combines /careful + /freeze for maximum protection. Best for critical production work.

RESULTS

Real Output, Real Numbers

600K+
lines of code
in 60 days

362
commits
per week

140K
lines added
per week

35%
of output
is tests

Garry's amazing part-time output while running Y Combinator as CEO.

EXAMPLE

"Build me a daily briefing app"

8 commands. 2,400 lines. 11 files. ~8 minutes to deploy.

`/office-hours` → `/autoplan` → `build` → `/review` → `/qa` → `/ship`

INPUT	REFRAMED	OUTPUT
"daily briefing app"	"personal chief of staff AI"	Deployed app + regression tests

GET STARTED

Up and running in 30 seconds

```
$ git clone https://github.com/garrytan/gstack
~/.claude/skills/gstack

$ ~/.claude/skills/gstack/setup.sh
```

REQUIREMENTS

Claude Code
Git
Bun v1.0+
